

Amendments to the Specification:

Please replace the paragraph beginning at page 5, line 26 with the following amended paragraph:

[0035] With reference to fig 2, a request is received by the server in step S1, resulting in the generation of a result in step S2, i.e. a number of selected rows from one or several table columns. The software component 12 determines (step S3) if any items in the result are marked for monitoring in the database. If no marked items are included in the result, the result is communicated to the user in a standard way (step S4). If, however, ~~marked~~ marked items are included in the result, the intrusion detection component 13 stores the query result, or at least those parts referring to the marked items, in the record 14, and the program control initiates the intrusion detection (step S6-S10).
